

COMPACK 2009

NON-IONIC SPREADER ACTIVATOR FOR AGRICULTURAL SPRAYS

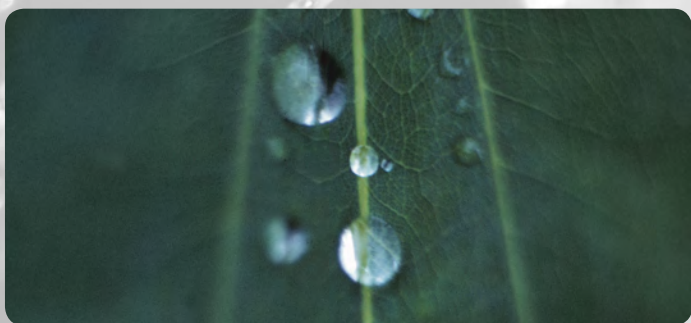

The efficient use of agricultural chemicals is one of the largest issues facing farmers today. Standard application practises are often wasteful and costly when compared to the return to the crop. Australian Agricultural Chemicals has designed a product that efficiently targets the application of these chemicals to where it is needed most.

COMPACK 2009 is a combined spreader / activator for increasing the effectiveness of various agricultural chemicals. It ensures the adequate wetting of plant surfaces.

ACTIVE INGREDIENTS

A blend of Non Ionic Surfactants

COMPACK 2009 is suggested for use where quick wetting, uniform coverage and increased retention of sprays are required. Use to obtain adequate wetting of hard to wet weeds, grasses and brush to aid the absorption of weedicides.

FUNGICIDES, INSECTICIDES, MITICIDES AND FOLIAR SPRAYS

AS EMULSIFIABLE CONCENTRATES

5 - 10mL / 100L spray mixture
10 - 20mL / 100L spray mixture (low volume)

AS WETTABLE POWDER

10 - 20mL / 100L spray mixture
30mL / 100L spray mixture (low volume)

MISTING APPLICATION

50 - 100mL / 100L spray mixture

HERBICIDES

SELECTIVE USE

50mL / 100L spray mixture
100mL / 100L spray mixture (low volume)

NON-SELECTIVE USE

300mL / 100L spray mixture
600mL / 100L spray mixture (low volume)

MISTING APPLICATION

100 - 150mL / 100L spray mixture
