

HydraFlow

FULVIC 5

5% Liquid Fulvic Acids

HydraFlow Fulvic 5 is a blend of liquid Fulvic acids that when applied to soil assist in increasing microbiological activity, nutrient and organic status as well as maintaining soil fertility and structure.

HydraFlow Fulvic 5 is suitable to use with other water-soluble NPK fertilisers or as a soil amendment on its own. Fulvic acids will complex most plant nutrients and make them readily available for uptake by plants through foliar applications.

Scientific research has shown that the fulvic acids contained in HydraFlow Fulvic 5 improves the efficiency of uptake by plants. This is very important in correcting any nutrient deficiencies in plants during growth, especially where deficiencies in nitrogen or trace elements are concerned.

The fulvic acids are extracted from the humic substances of naturally derived plant organic matter. Fulvic acids are distinguished by their golden brown colour as compared to the dark brown to black colour of humic acids. Fulvic acids are smaller in molecular size and more soluble.

Fulvic acids are widely known for their ability to:

- Improve the uptake of nutrients by plants
- Chelate with plant nutrients to reduce their immobilisation in the soil.
- Promote quicker seed germination and faster root and shoot growth.
- Provide a valuable source of carbon for soil micro-organisms.
- Improve the efficacy of many non-selective herbicides.

GUARANTEED ANALYSIS	W/V%	W/W%
Fulvic Acids	5.00	4.90

CROP	RATE: L / Ha	MIN / SEASON
Vines	3 - 6	30 L / Ha
Broadacre	3 - 6	15 L / Ha
Vegetables	3 - 6	15 L / Ha
Tree Crops	3 - 6	15 L / Ha
Foliar	Product can be blended to foliar applications to assist with uptake and translocation.
